### Editorial:

Fingers crossed, at last we can get back to normal, if there is still such a thing! You will have received the list of courses for term 4 and an on-line booking form, so time to get the old grey cells going again!

We have managed to quit our 2 surplus desks and 3 of the 5 chairs which were in the store shed at Taylor St and so all our stuff is out of the shed. There are still 2 chairs available from the Learning Centre (\$5 donation each) so if you want them call in on a Monday at 1 pm.

Welcome to new members Kiri Gray, David Welch and Ann Maclure. Hope to see them and all of you at the Social Meeting on the 19<sup>th</sup>.

"At election time, I'll base my vote on modern issues that really matter — which candidate has the coolest YouTube video and the most friends on their MySpace page!"

"When you said you were getting a mobility scooter, Dad, this isn't what I had in mind."

## MOUSE POINTER HELP

Sometimes it's hard to locate your mouse pointer on a page, for various reasons. It may be that the colour of the background makes it hard to see the mouse pointer. Whatever the reason, there are adjustments you can make to help in this situation.

Go to **Settings > Devices >** and click on **Mouse** on the left. Click on **"Additional Mouse Options"** and in the Mouse Properties dialog box click on the **"Pointer Options Tab**. At the bottom of the dialog box, click to place a tick beside **"show location of pointer when I press the Ctrl key"**. Click **OK** to confirm your changes. The next time you lose your mouse pointer, just press the **CTRL** key and Windows will create concentric circles around your pointer to help you find it.

**Hint:** You might have to press the CTRL key a couple of times; the circles don't stay on the screen long.

Alternatively, back on the **Mouse Settings** page, click **"Adjust mouse and pointer size"** Here you can change the size, colour and thickness of the mouse pointer to make it easier to see.

### [A New Covid Self-test:](#)

Pour a glass of your favourite whisky (red or white wine is also effective). Then see if you can smell it. If you can, that's a good sign, because the virus affects the sense of smell. You're halfway there. Now drink it. If you can taste it, you are virus-free because loss of taste is another symptom. I tested myself 7 times last night and was virus-free every time, thank God.

I will have to test myself again today because I have developed a throbbing headache, which can be one of the symptoms.
